

Dear [Hiring] Team,

This cover letter was built with AI automation — complete with working buttons that lead to my website, where you can see the scope of what I deliver. It’s a small demonstration of how I work: fast, functional, and hands-on.

I don’t just use AI — I orchestrate it. In one 48-hour sprint, I built my entire website 1.0 by coordinating eight AI agents across two computers and three monitors, each handling different tasks from icon design to system prompts. The result wasn’t theory — it was a live, branded product delivered under real constraints.

At HomeAdvisor I mastered operations under pressure; at Thumbtack I flipped that experience into AI-driven enablement, cutting resolution times from days to hours and training 100+ agents to work confidently with AI tools.

I move fast, translate ambiguity into clarity, and deliver systems people actually use.

Thank you for your time and consideration.

Warm regards,
Kyle J. Mohney
