

Dear Hiring Team at Gametime,

I'm excited to apply for the Quality Manager role. My expertise sits at the intersection of QA, training, and AI-powered enablement, and I'm eager to bring that to a company whose mission of uniting people through live experiences resonates with me personally — as both a QA leader and a live performer who knows first-hand how critical tickets and smooth logistics are to a great event.

At Thumbtack, I reduced resolution times from two days to under one hour by designing new standards and SOPs for case handling. These became the foundation for how QA was measured once that function was formally introduced. I partnered with support teams as a go-between manager — auditing QA scores, highlighting corrections, and monitoring CSAT, call handling, and advanced conversation benchmarks. Alongside maintaining 100% QA scores of my own, I authored SOPs, training decks, conversation flow charts, and delivered 1:1 coaching that consistently improved team performance. I also piloted AI copilots and automation to improve accuracy, reduce false positives, and streamline workflows. Before the company-wide layoff, I was under consideration for a QA Manager role — recognition of the leadership impact I was already delivering.

Since then, I've extended my expertise into consulting, writing a comprehensive guide to online advertising success for small and large businesses, and documenting my AI Coordination Methodology at kylemohney.com. There, you can see how I apply AI to QA, training, and operations with real-world examples across knowledge systems, projects, and process improvements.

I'm inspired by Gametime's mission and see a clear opportunity to contribute by raising QA standards, designing impactful training, and embedding AI-driven improvements that empower agents and elevate every customer interaction.

Thank you for your consideration. I would welcome the opportunity to discuss how I can help Gametime deliver consistently exceptional customer experiences.

Sincerely,
Kyle J. Mohney
